

A coat of armor that kills viruses & bacteria* where you live, learn, and work.

THERE'S NO BETTER FEELING THAN FINDING THE PERFECT PAINT COLOR

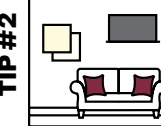

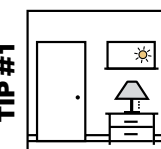

To achieve a well-balanced color scheme, use the simple 60 | 30 | 10 ratio.

60% PRIMARY COLOR
Will be used the most in the room.

30% SECONDARY COLOR
For ceiling, cabinets or accent wall.

10% ACCENT COLOR
Typically used for trim, cabinets or décor.

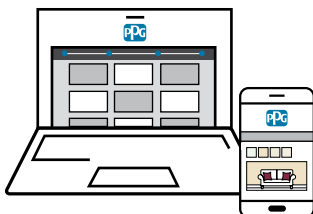

Trying color in your home is the best way to make sure the color works.

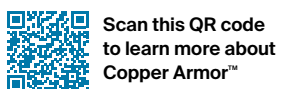

TIP #1
Test your swatches! Colors may look different from room to room depending on the lighting.

TIP #2
Use furniture, décor and window treatments to aid in color coordination.

*Kills 99.9% of bacteria Staphylococcus aureus (Staph), Pseudomonas aeruginosa, Enterococcus faecium, Klebsiella pneumoniae, Acinetobacter baumannii, Enterobacter aerogenes, Methicillin-resistant Staphylococcus aureus (MRSA), Vancomycin-resistant enterococci (VRE), Escherichia coli (E. coli), and Salmonella, and viruses Feline Calicivirus and SARS CoV-2 within 2 hours of exposure to paint surfaces.

†Effective for up to 5 years based on test method "Protocol for the Evaluation of Bactericidal Activity of Antimicrobial Coated Surfaces" (MRID 5106260) as long as the integrity of the surface is maintained and is part of a comprehensive infection control and hygiene program. Cleaning agents typically used to maintain painted surfaces are permissible including multi-purpose, bleach, and peroxide cleaners. Quaternary ammonium (quats) disinfectants should be avoided.

*Colorants added to this base paint may increase VOC level significantly depending on color choice.

PPG | 400 BERTHA LAMME DRIVE | CRANBERRY TOWNSHIP, PA 16066

The colors shown in this brochure are produced using a printing process which approximates the actual paint color. Lighting affects how the color will appear. For best color representation, view an actual color swatch in the space you wish to paint.

Color chips are affected to some degree by the type of light in which they are viewed, exposure to heat and light rays as well as the age of the chip itself. Therefore, there may occasionally be a slight difference between the color and sheen of the chip shown and the actual paint when applied to a surface.

COPPER ARMOR™

ANTI-VIRAL & ANTI-BACTERIAL PAINT*

PPG COPPER ARMOR™ WITH CORNING® GUARDIANT® TECHNOLOGY

An interior paint that kills 99.9% of viruses and bacteria* on the painted surface. This product provides excellent paint characteristics such as durability and hide, while continuously killing viruses and bacteria for up to 5 years*. PPG Copper Armor is a low odor paint and primer in one that provides a mildew resistant coating and was formulated without VOCs*.

FEATURES & BENEFITS

This product kills 99.9% of viruses and bacteria* providing an additional barrier on the surface from bacteria and viruses after frequent cleaning.

PPG Copper Armor continuously kills viruses and bacteria for up to 5 years* providing continuous safeguard to painted surfaces against bacteria and viruses between cleaning and sanitizing.

This paint + primer carries all of the application properties of a premium paint and offers excellent hiding & durability.

Copper Armor uses the naturally occurring copper element as its active ingredient to kill viruses and bacteria.

Copper Armor is available in Eggshell and Semi-Gloss sheens.
